

DESTRUCTION OF SUPPLIERS' PHARMACEUTICAL INVENTORIES

Pharmaceuticals that are not suitable for consumption must never fall into the wrong hands or enter the ecosystem. Consequently, pharmaceuticals are classified as hazardous waste and must be handled and destroyed pursuant to the prevailing laws. Tamro can collect your pharmaceutical and reference samples and make sure that they are destroyed in a satisfactory manner.

WHY CHOOSE THIS SERVICE?

We offer a comprehensive solution and ensure that your obsolete goods (e.g. expired pharmaceutical samples) are collected, handled and destroyed. A certificate can also be provided verifying that the goods have been destroyed.

DESCRIPTION OF SERVICE

Tamro accepts pharmaceuticals and commercial goods for destruction. We are unable to accept waste that contains syringes or sharp objects, or hazardous waste. Examples of hazardous waste include pharmaceuticals that contain toxic metals, such as antimony, arsenic, lead, chemotherapeutic agents, chromium and mercury. In the case of liquid pharmaceuticals and nutrient solutions, we need to confirm the volumes set for destruction prior to the goods being sent to us.

We will transport your waste set for destruction back to Tamro according to your preferences, based on a lead time of five business days. The date for collecting the waste is decided on when booking the service. The waste cannot be collected on the same date as the service is booked. Although we are unable to accommodate traceability requests, we

can offer a certificate of destruction once the waste has been destroyed. Our customer service must be notified of the request for a certificate of destruction when booking the service.

Contact details for Kundservice CL

Kundservice CL at Tamro handles bookings and answers questions concerning the destruction of pharmaceutical inventories held by suppliers. Call +46 31-767 76 43 or email support.order@tamro.com.
